

PSORIATIC ARTHRITIS TREATMENT isn't the same for everyone.

The SELECT-PsA 1 study may provide a different option.

You may qualify for the SELECT-PsA 1 clinical research study if you meet these requirements:

- Are at least 18 years of age
- Have been diagnosed with psoriatic arthritis with symptoms for at least 6 months
- Have tender and swollen joints
- Have taken drugs such as methotrexate, sulfasalazine, leflunomide, or apremilast, but your symptoms didn't completely resolve
- Must NOT have taken any biologic DMARD drugs

Participants may receive, at no-cost, investigational drug and study-related care.
